

Subject: Removing HP OpenView-related ECS Custom Code  
The following directive is issued to all DAACS and labs.

**25 Sep - 01**

**Issue:** The following PDPS database manipulation scripts have been renamed on the baseline to comply with ECS naming conventions in accordance with NCR 15554:

clear\_db  
load\_db  
cump\_db  
list\_db  
save\_dbMkcfcg  
reset\_dbMkcfcg

The new names are as follows:

clear\_db → EcPIDbTruncateTable  
load\_db → EcPIDbBcpIn  
dump\_db → EcPIDbBcpOut  
list\_db → EcPIDbList  
save\_dbMkcfcg → EcPIDbSaveMkcfcg  
reset\_Mkcfcg → EcPIDbResetMkcfcg

The old files must be removed from the file system to avoid operator attempts to use the old scripts which are no longer operational

**Fix:**

1. On the PDPS Host go to the utilities directory to remove the Save\_dbmkcfcg, reset\_dbMkcfcg and EcPIDbList files

- a. `cd /usr/ecs/<MODE>/CUSTOM/utilities`
- b. `\rm -f save_dbMkcfcg`  
`\rm -f reset_dbMkcfcg`  
`\rm -f list_db`

2. On the PDPS Host go the saved\_db directory to remove the clear, load and dump scripts

- a. `cd /usr/ecs/<MODE>/CUSTOM/utilities/saved_db`
- b. `\rm -f clear_db`  
`\rm -f dump_db`  
`\rm -f load_db`
